EXPLANATORY NOTES

For Part A & B

1. Risk Factors:

- The herd contains goats that were born or raised with dairy goats. The herd contains dairy breeds or dairy cross breed goats. Exceptions are goats that are from JDMAP herds.
- The herd has grazed land in the past 5 years that is at risk of Johne's disease (JD) contamination. Land at risk of JD contamination includes land that is being grazed, or has been grazed in the preceding 12 months, by:
 - Dairy breeds or dairy cross bred goats, which are not sourced from JDMAP herds.
 - Goat herds with JD.
 - Dairy cattle with a Johne's Disease Dairy Score of less than 7.
 - Beef cattle with a Johne's Beef Assurance Score of less than 6.
 - Sheep other than from SheepMAP flocks.

2. Infected but undertaking a Property Disease Management Plan (PDMP): An infected herd that has not yet completed a PDMP but is complying with an on-farm disease control program combining elements of testing, kid rearing and biosecurity that has been developed by their veterinarian.

3. Infected or suspected of being infected: Means infected or suspected of being infected with JD. Herds are no longer regarded as infected or suspected of being infected when a PDMP has been completed in consultation with their veterinarian .

4. Check Test: A test of 50 homebred goats over 12 months of age in the herd (or all goats over 12 months of age in smaller herds) by serology or faecal culture or pooled faecal culture of 2 pools each of 25 goats, with negative results. The animals should be selected so as to increase the probability of detecting infection, i.e. older animals, animals in poor body condition.

5. Approved Vaccinated Goat: A goat that is:

- Vaccinated with an approved JD vaccine by 16 weeks of age; or
- Vaccinated with an approved JD vaccine after 16 weeks, when the flock
 - was in the JDMAP, or
 - had undertaken a negative Sample Test by PFC in the 2 years preceding the vaccination; or
 - is identified as an Approved Vaccinate.

6. Nationally approved kid rearing plan: A kid rearing plan designed to minimise the spread of JD in intensively managed herds, which has been documented and agreed by GICA and Animal Health Committee.

Q8. Whole herd test - an individual test of all goats using a serological test (CAE ELISA), including the investigation of reactors, or a bulk milk herd test with sampling occurring when most goats are lactating. More details are available at: animalhealthaustralia.com.au/goatmap

Q11. Virulent footrot is defined differently in each state. For information on this and interstate movements of goats, producers should visit the relevant state department website or contact animal health staff from that department.

Q12. If answered Yes, all animals should have been checked during at least one spread period, and any lameness investigated, with no signs of the disease observed. If answered no, producers can add any information about the disease and their management of it; e.g. whether any testing has been carried out, or what treatments may have been used recently.
